src\components\NewPost.jsx

```jsx
 1  //
 2  // NEW POST
 3  // ========
 4  // This is a React component that is able to create a new post
 5  // amongst the list of current posts. It illustrates how the
 6  // props object passed in to this component can return the data
 7  // entered back up to to other components. It illustrates the
 8  // React capability called Lifting Up State.
 9  //
10  // Revision History
11  // ================
12  // 28.11.2024 BRD Original version
13  // 30.11.2024 BRD Modified to now exchange information with other
14  //                components.
15  //
16  import classes from './NewPost.module.css';
17
18  function NewPost(props) {
19      return (
20          <form className={classes.form}>
21              <p>
22                  <label htmlFor="name">Your name</label>
23                  <input id="name"
24                      type="text"
25                      required
26                      onChange={props.onAuthorChange}
27                  />
28              </p>
29
30              <p>
31                  <label htmlFor="body">Text</label>
32                  <textarea id="body"
33                      required rows={3}
34                      onChange={props.onBodyChange}
35                  />
36              </p>
37          </form>
38      );
39  }
40  export default NewPost;
